

KS1 Poles Apart Knowledge Organiser

Geography Terms 3 and 4

Key Enquiry Question: How does the weather change in different parts of the globe?

National Curriculum Objectives:

- Identify seasonal and daily weather patterns in the United Kingdom and the location of hot and cold areas of the world in relation to the Equator and the North and South Poles.
- Use simple compass directions (North, South, East and West) and locational and directional language [for example, near and far; left and right], to describe the location of features and routes on a map.

Key vocabulary

Word	Meaning
Human Feature	Things that have been built by people.
Physical Feature	Things that are made by nature.
Climate	The weather that is most common in that area
Weather	The degree of hotness or coldness.
Equator	The centre line of the Earth
North and South Pole	The top and bottom magnetic points of the globe.

Sticky Knowledge:

Both the Arctic and Antarctica are cold areas of the globe. The weather is cold, windy and dry.

The Arctic is in the North of the globe. It is a large area of ice which covers the Arctic Circle.

The Antarctic is the most southern part of the globe and is an area of land covered by ice.

Polar bears live in the Arctic but not the Antarctic.

Penguins live in Antarctica.

People who live in cold places have adapted to keep warm.
